31-3-9	2					*	**	*	3
Formulation: The percentages of Nitrogen, Phosphorus, and Potassium in the Product									
When choosing between similar formulations those with higher percentages of slow release nitrogen are preferable									
Fe%,Mn%,Mg%: The percentages of optional Iron, Manganese, and/or Magnesium in the Product									
These are desirable additions to the main ingredients									
*: Indicates the degree of suitability for the application on a scale of 1 to 5, 5 being best									
lbs/1000ft <sup>2</sup> :The maximum amount of the product to use in pounds per thousand square feet of lawn or garden per application. Two applications per season at this rate are usually sufficient.									
Per Label: Weed control formulations are considered pesticides and label instructions must be followed carefully									
Pre-emerg: Formulations safely used in February or October for preemergent weed control on local lawns									
N/R: Weed control formulations with high N concentrations or proportions are usually unsuitable for our area									
N/R: The proportions of N-P-K in these formulations are usually unsuitable to the application and might be harmful									
Perhaps: These formulations are useful under certain circumstances to accommodate unusual soil conditions									
For more information or clarification contact the County Extension Office at 689-5850
